PART A

For each of the following questions there are four choices marked A, B, C and D. Only one of them is correct. You should decide on the correct choice and write down its mark in ().

ANSWER: 1. C 2. B 3. C 4. C 5. D 6. B

PART B

Answer the following questions.

1. ANSWER:

Three levels architecture includes (1) External level contain user views (external schema / sub_schema); (2) Conceptual level contain logical schema (conceptual schema / logical schema); (3) Internal level contain physical schema (internal schema).

Logical data independence: external schema is independent of conceptual schema, changes in conceptual schema need not affect external schema / view.

Logical data independence: conceptual schema is independent of internal schema, changes in internal schema need not affect conceptual schema and external schema/view.

2. ANSWER:

Integrity constraints are those rules to assure one database to be in consistent situation, it can be divided into three kinds includes entity integrity, referential integrity and user-defined integrity.

(1) entity integrity: attribute value of candidate key is not allowed to be NULL;

(2) referential integrity: If Fk is the foreign key of relation R1, Pk is the candidate key of relation R1, Then the value of Fk is equal to the value of Pk or is NULL;

(3) user-defined integrity: a kind of integrity which is defined by users according to different applications.
