PART A

For each of the following questions there are four choices marked A, B, C and D. Only one of them is correct. You should decide on the correct choice and write down its mark in ().

ANSWER: 1. B 2. B 3. B 4. B 5. C 6. D

PART B

Answer the following questions.

1. ANSWER:

Database integrity: Validity and consistency of data should be ensured by DBMS at any time and under any circumstances

Database security: Protect database from malicious attempts to steal or modify data.

2. ANSWER:

Candidate key: an attribute or a group of attributes from a relation, its value or their values can uniquely identify the tuple.
It is possible that there are more than one candidate key for a relation.

Primary key : to denote a candidate key that is chosen by the database designer as the principal means of identifying tuples within a relation, there is only one primary key for a relation.

Super key : a collection of attributes which includes candidate key.

3. ANSWER:

Data: data is the physical symbols that represent different kinds of information.

Database : database is a shared collection of logically related, structured data (and a description of this data), designed to meet the information needs of an organization.

Database management system: DBMS is a data management software (System Software) between users and operation system, it provide an environment that is both convenient and efficient for people to use in storing and retrieving data.

Database system: a system to organize, store, retrieve, manage, maintain data.

Data impendence: the immunity of application programs to changes of the data structure.
