PART A

For each of the following questions there are four choices marked A, B, C and D. Only one of them is correct. You should decide on the correct choice and write down its mark in ().

ANSWER: 1. A 2. C 3. A 4. D 5. B 6. D

PART B

Answer the following questions.

ANSWER:

candidate key is an attribute or a group of attributes from a relation, its value or their values can uniquely identify the tuple.

primary key is to denote a candidate key that is chosen by the database designer as the principal means of identifying tuples within a relation.

A relation R1 may include a group of attributes which is not the candidate key of R1, but of another relation R2., this group of attributes is called foreign key of R1.

In one relation, maybe there are more than one candidate key, but the relation has only one primary key, and the primary key is one of candidate keys; the foreign key of one relation must be the primary key of other relations,foreign key shows the relationships of different relations.
