

Exercise 06

PART A

For each of the following questions there are four choices marked A, B, C and D. Only one of them is correct. You should decide on the correct choice and write down its mark on the answer sheet.

1. The view mechanism of SQL can enhance the _____ of database systems.
A. integrity B. concurrency control C. isolation D. security
2. The GRANT and REVOKE of SQL can be used to maintain the _____ of database systems.
A. integrity B. reliability C. security D. consistency
3. The security verification can prevent _____.
A. incorrect data to be entered into database
B. unauthorized users and operations to access database
C. inconsistent data to be entered into database
D. authorized users and operations to copy data from databases
4. The integrity verification can prevent _____.
A. incorrect data to be entered into database
B. unauthorized users to access database
C. unauthorized operations to access database
D. correct data to be deleted from database
5. In the following SQL commands, _____ belongs to data control commands.
A. GRANT B. DROP C. UPDATE D. ALTER
6. In order to define primary keys using SQL, we should use _____ clause.
A. PRIMARY KEY B. GRANT C. REFERENCES D. ALTER
7. In order to define foreign keys using SQL, we should use _____ clause.
A. DROP B. GRANT C. REFERENCES D. ALTER

PART B

Fill in blanks with proper words or phrases.

1. The granting of a right or privilege, which enables a subject to legitimately access to a system is referred to as (a). SQL uses (b) statement to enable a user to operate a data object, and uses (c) statement to disable a user to operate a data object.
2. Database integrity means that the data in the database should be (a) and (b).
3. SQL uses (a) clause to define the entity integrity constraint, uses (b) and (c) clauses to define the referential integrity constraint.

PART C

Discuss each of the following terms.

- (a) database integrity
- (b) database security
